Patent No. 566293, Application US/09328352

Sequence 6023, Application US/09328352

Patent No. 566294

Patent No. 566294

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: GTC99-03PA

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT PILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

SEQ ID NO 6023
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A,Status: preliminary; nucleic acid sequence not shown, translation not shown A,Status: preliminary; nucleic acid sequence not shown, translation not shown A,Molecule type: DNA A,Residues: 1-212 «KUDA A,Residues: 1-212 «KUDA A,Cross-references: UNIPROT:P17758; EMBL:X52223; NID:g60155; FIDN:CAA36466.1; PID:g60158 A,Notes: the nucleotide sequence was submitted to the EMBL Data Library, June 1990 C;Superfamily: AIDS vif protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "If protein - human immunodeficiency virus type 2 (isolate GH-1)

NyAlternate names: orf-Q protein; sor protein

C;Species: human immunodeficiency virus type 2, HIV-2

A;Note: host Homo sapiens (man)

C;Accession: JS0329

G;Accession: JS0329

A;Title: Sequence of a distinct HIV-2 isolate from Ghana showing significant divergence

A;Reference number: JS0327; MJD: 90122350; PMID: 2611042

"Composite co-activator ARC mediates chromatin-directed
transacriptional activation.";
Nature 388:828-83(1999).
-i- FUNCTION: Plays a role in transcriptional coactivation. Plays a
role in nuclear hormone receptor-mediated transactivation.
-i- SUBUNIT: subunit of the large multiprotein complexes ARC/DRIP and
TRAP. Interacts and co-precipitates with Trap220. Does not
directly bind nuclear hormone receptors.
                                                                                                                                                                                                                                                                                                                                SEQUENCE FROM N.A., AND IDENTIFICATION IN DRIP COMPLEX.

Submitted (FEB-2004) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Part of the RFC dlamp loader complex which loads the PCNA sliding clamp onto DNA (By similarity).
-!- SUBUNIT: Heterowultimer composed of small subunits (rfcs) and large subunits (rfcL) (By similarity).
-!- SIMILARITY: Belongs to the activator I small subunits family. RfcL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Sequence 32999, Application US/09252991A

Sequence 32999, Application US/09252991A

Patent NO. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ARRUGINGA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196,136

CURRENT PAPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PLING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 248

GENERAL INFORMATION:
APPLICANT: SMITH, DOUGLAS
APPLICANT: SMITH, DOUGLAS
APPLICANT: MAO, JEN-I
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES
TITLE OF INVENTION: RELATING TO MYCOBACTERIUM TUBERCULOSIS AND LAPRAE FOR
TITLE OF INVENTION: DIANNOSTICS AND THERAPEUTICS
NUMBER OF SEQUENCES: 411
CORRESPONDENCE ADDRESS:
ADDRESSEE WOLF, GREENFIELD & SACKS, P.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
